

NEW Online Course for Adult Educators

Integrating Technology into the Classroom

Technology is everywhere. From the spoon you use for your breakfast cereal to the smart phone you have glued to your hand. In the world of adult education, technology plays an important role. Traditional methods of teaching can be paired with technological advances to create a unique learning experience for both teachers and students.

In this course, Mr. Dan Bingaman, Program Advisor and Distance Learning Coordinator for the Arkansas Division of Workforce Services - Adult Education, helps adult educators define, discuss, evaluate, and investigate integrating technology into their classrooms.

Register on the AALRC PBS Portal site at:
